

More than just e-mail archival.

- **Rule-based, centralized e-mail archiving guarantees seamless records and fulfills legal requirements.**
- **Centrally archives incoming/outgoing e-mails and internal e-mail traffic on groupware servers.**
- **Enables encrypted filing and protects against unauthorized access to the archive.**
- **Prevents subsequent manipulation and abuse of e-mail content. Access to e-mail archive is restricted to authorized individuals.**
- Central administration through a common user interface.
- Runs on nearly all operating systems supported by the mail platform.
- Sender-/recipient-specific e-mail archival.
- Creates new archival folders according to custom settings (size/time/thresholds).
- Archival in Groupware database.
- Archival in XML files.
- Automatic monitoring of available disk space.
- Integration of external archival systems.
- Optional removal of e-mails after successful archival.
- Optional encryption of all e-mails to be archived.
- Optional signing of all e-mails to be archived.
- Optional notification e-mails to administrator.
