

The complete security package for the leading e-mail platforms.

- **Intelligent, fast and server-based**
- **Totally reliable and deployable company-wide**
- **E-mail security in an optimally coordinated program package**

E-mail and messaging are integral components of many business processes today. The highest degree of security and availability of the communications infrastructure is thus important to the very existence of a company.

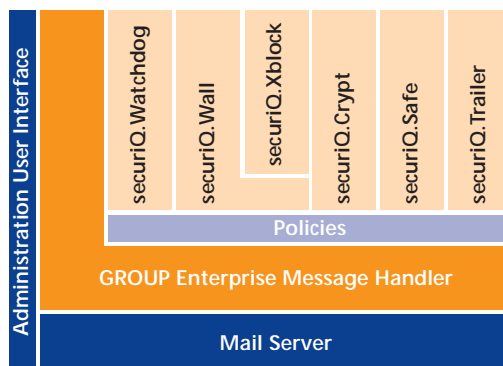

Any misuse or irregularity in the e-mail communication causes considerable direct and indirect costs. In addition, e-mail and messaging servers are exposed to a wide variety of hazards.

Your TCO can be reduced effectively with securiQ.

securiQ stands for rule-based content checking of images and text, comfortable and automatic encryption, auditproof filing, personalized legal disclaimer and modular virus protection – all in one optimally coordinated program package.

■ Highlights

- **Complete expert content security**
GROUP Technologies AG is the specialist for e-mail-based security solutions. GROUP's long time experience warrants for field-tested and solid products.
- **Modular design**
The products were created with the enterprise in mind. They are modular to meet current needs. Yet additional modules can be seamlessly integrated later. Also, our solutions are highly scaleable to grow with your company or organization.
- **Comprehensive e-mail security policy**
The individual products use a shared rule-based security policy. The direct interaction of all functions guarantees optimum performance and security.
- **Cost reduction**
All products are administered centrally using any Internet browser. Shared logs, statistics and error reports considerably reduce administration costs.
- **Security and investment protection**
securiQ integrates seamless into Lotus Notes and Microsoft Exchange based e-mail platforms. This not only provides optimum functionality and stability, but also guarantees that it will be usable in the future and protects your investments.

.Crypt

Encryption

More than just encryption.

- Server-based, user-transparent e-mail encryption
- Supports leading-edge encryption standards (PGP, S/MIME)
