

- Creates an indexed Notes database of every property in your design
- Helps automate compliance verification
- Creates a blueprint to help you identify functional design dependencies

Teamstudio® Analyzer

Visibility Into Your Lotus Notes® and Domino® Application Designs

Teamstudio Analyzer provides visibility through comprehensive documentation and indexing features that help developers gain a better understanding of their application designs. Analyzer improves the quality of business applications by allowing Lotus Notes developers and administrators to audit the application for standards violations and defects.

Development without Analyzer...	Development with Analyzer...
Do you find it difficult to gain a detailed functional understanding of existing Notes/ Domino applications?	You can create an indexed Notes database containing every property in your application design.
Do you have trouble complying with internal design standards because of time pressures and the occurrence of human error?	You can automate compliance verification, quickly identifying many potential issues prior to application deployment.
When you modify design elements, are you unsure of the impact on other parts of your application?	By creating a design blueprint, you can quickly determine functional dependencies within the design.

Extending Analyzer’s Capabilities

In order to get the most out of Analyzer’s compliance features, you will need some filters. One option is to create your own filters using the built in filter wizard. Another option is to use one of our pre-configured filter packs. Teamstudio offers two pre-configured filter packs: Teamstudio Best Practices Filters and Teamstudio Migration Filters. These filters can be easily extended, expanded and customized to support internal standards. Finally, Teamstudio offers consulting services, which can create a custom set of filters to meet your needs.

Who Is Teamstudio?

Teamstudio designs technologies that address IT governance requirements — with policies and best practices for control, compliance, efficiency, and security within the Lotus Notes environment.

We call our approach "Just Enough Governance for Notes."
