

- Automatically copies over dependent elements
- Perform impact analysis of all template changes
- Conveniently provides indexed access to your favorite code or forms
- Automate the design refresh of multiple database designs with a single command

# Teamstudio® Design Manager

Automated Design Reuse Tool for Lotus Notes® and Domino® Applications

**Teamstudio Design Manager** brings more control to the development environment by facilitating efficient code reuse. Design Manager allows users to maintain dependencies when copying design elements; and makes it easy for them to investigate the impact of potential template changes.

| Development without Design Manager...   | Development with Design Manager...  |
|---|---|
| Does copying and pasting Notes® design elements from one database into another fail to deliver results because related elements are missed in the process, resulting in frustrating, iterative troubleshooting? | Copying design elements is back to a one-step process. All dependent elements are automatically copied over.                                    |
| Are you blindly changing templates elements, with no visibility into the impact on existing applications?   | You can perform an impact analysis of all template changes, allowing you to proactively correct any potential problems or rethink your changes. |
| Are you saving your favorite code via a time-consuming manual process or recreating it each time you need it?   | You have convenient indexed access to your favorite code or forms, from within Notes Designer.  |
| Is manually executing a design change across specific databases a time consuming and potentially error prone task?  | You can automate the design refresh of multiple database designs with a single command; and update only the databases that you select.          |

## Teamstudio Tool Integration

From within Teamstudio Design Manager’s user interface, you have the ability to integrate with other powerful Teamstudio tools—Analyzer, Configurator and CIAO!®—without having to disrupt your thought process.

### Who Is Teamstudio?

Teamstudio designs technologies that address IT governance requirements — with policies and best practices for control, compliance, efficiency, and security within the Lotus Notes environment.

We call our approach "Just Enough Governance for Notes."
