

Teamstudio® Validator

Data integrity tool for Lotus Notes®

Teamstudio Validator is a data integrity tool that audits your documents and reports on compromised functionality, ensuring a robust set of applications. Validator helps you quickly resolve replication or save conflicts within your database documents, helping you protect the data integrity of those documents.

- Find and fix replication and save conflicts
- Easily identify orphaned documents
- Identify broken URLs and document links
- Quickly locate fields that do not match the design

Development without Validator...	Development with Validator...
Can you easily find and reliably fix all your replication and save conflicts?	You can quickly find every conflict in your database and better understand how to merge them.
Are broken URLs and document links causing an increase in support calls?	You can speed the identification and correction process, thus improving the overall quality of your application.
Are design changes to fields causing loss of functionality?	You can quickly locate all fields that do not match the design, significantly improving functionality.
Are orphaned documents consuming valuable server resources, and you have no way to find them?	You can quickly identify orphaned documents, greatly simplifying what could have been a major undertaking, resulting in improved application performance.

Teamstudio Validator lets you view problems by document or error type.

Who Is Teamstudio?

Teamstudio designs technologies that address IT governance requirements — with policies and best practices for control, compliance, efficiency, and security within the Lotus Notes environment.

We call our approach "Just Enough Governance for Notes."
